Full-stack developer with 3+ years of experience in building scalable and secure web applications. Skilled in FastAPI, React, and cloud deployments using Azure. Experienced in real-time systems, secure authentication (OAuth2, MFA), and modern frontend architecture.

SKILLS

- **Python, FastAPI, HTML, CSS, Tailwind CSS, JavaScript, TypeScript, ReactJS, MySQL, MongoDB, Git, GitLab, Docker, Terraform, SQLAlchemy, Playwright, Azure DevOps**

EXPERIENCE

- **Infosys Ltd. Pvt.** Pune, MH
Senior System Engineer *February 2024 - Present*
 - * Developed a highly responsive data dashboard using **React** (with **AG Grid**) for complex **tabular data** rendering, connected to a **FastAPI** backend. Integrated **asynchronous API** calls via **Axios** and used AG Grid's **server-side** row model to efficiently handle large datasets from multiple third-party **REST and internal APIs**, ensuring minimal load times and smooth user interaction even with tens of thousands of rows. Leveraged **SQLAlchemy** for ORM-based database operations, enabling robust interaction with relational databases.
 - * Implemented secure user **authentication** using **OAuth 2.0 with Azure Entra ID** and **PKCE flow on the frontend**. This approach ensured secure token handling and compliance with enterprise-grade authentication requirements.
 - * Enabled **real-time data** synchronization by integrating **Socket.IO** with FastAPI using python-socketio and **socket.io-client** in React. Users received instant updates when data rows changed, were added, or deleted, without page reloads improving usability and reducing **backend polling** load by 40%.
 - * **Refactored state management** from React Context API to **Redux Toolkit**, improving performance and predictability.
 - * Contributed to **CI/CD** pipelines in **Azure DevOps**, integrating Azure App Services and Key Vault for deployment and secret management. **Containerized applications** using **Docker** for consistent local and production environments.
 - * Used **Terraform** to provision cloud **infrastructure as code**, ensuring reproducible and **scalable deployments**.
- **Infosys Ltd. Pvt.** Pune, MH
System Engineer *November 2021 - February 2024*
 - * Implemented new interactive features on a **data-driven dashboard** using **React**, enhancing user workflows by integrating dynamic filters, custom cell renderers in **AG Grid**, and conditional **UI components** based on user roles.
 - * **Integrated backend APIs** developed in **FastAPI** with the **React frontend** to enable seamless data flow, handling **request validation, response formatting, and error handling** to ensure robustness and reliability.
- **Infosys Ltd. Pvt.** Mysore, KA
Trainee System Engineer *June 2021 - Nov 2021*
 - * Trained in **JavaScript, Python, and SQL** at Infosys, with practical exposure to **web technologies, backend logic, and relational databases**.

EDUCATION & CERTIFICATIONS

- **Prof Ram Meghe Institute of Technology and Research Engineering College** Amravati, MH
Bachelor of Engineering in Electronics and Telecommunication Engineering *June 2016 – April 2020*
 - Certified in ReactJS, Python, JavaScript, and TypeScript, AZ900 (Infosys)
